First consecutive occurrence of letter with max count and the start index of the occurrence.

Examplen:10001111   : 4,4
aabbbbbACde : 2,5.
Had asked me to explain how my program works. if i can give some test cases apart from one given by them.
asked to to add 1 test case in the code.

I don't remember all the questions , have jotted down few that i could recollect.
F2F 1st round:
most of the discussion was about my project how is it structured.
how are the tables related in my project
simple scenario on DB which involved join , group and having clause.
what is index and how does it help in DB.
Collections that i have worked on.
concurrency am i aware about it and how is it implemented in my current project.
given a paragraph i need to find count of each words in the input paragraph.

F2F 2nd round:
about the project.
collections used
basic questions on exception.
one logical puzzle:
given a jar filled with red and white marble i need to paint all the marbles red as the output most efficiently.
